

You? Or the dust?

Don't let it ruin
your reputation.

about the granite
countertops?**

Or the dust?

Your customers expect extraordinary results. Finely detailed craftsmanship. Meticulously chosen materials and finishes. But what they won't accept is the dust.

Airborne remodeling dust is the number one irritant among homeowners.

Construction dust. It gets everywhere. Unmanaged it can cause respiratory and health issues for humans and pets. Damaging home electronics; getting on clothes, toothbrushes, furniture, and more. And stays around months, even after the remodeling project is over. Eliminate this problem by making BuildClean the foundation of your complete dust control plan.

The BuildClean Dust Control System is specifically developed for the remodeling market.

- Provide a more livable environment during remodeling.
- Differentiate yourself from your competitors.
- Helps control lead and crystalline silica to meet EPA and OSHA rules.

stonework?**

Or the dust?

The BuildClean Dust Control System offers you a revolutionary solution, drawing in air from the surrounding environment, passing it through two particle-trapping filters, and returning clean air into the space.

Managing remodeling dust has always been a problem. Until now.

Plastic dust barriers, shop vacs and fans just don't do enough. And brooms and vacuuming just stir it up. Used as part of your dust control plan, BuildClean eliminates 90% of the airborne dust and minimizes the migration of dust throughout your client's home.

Perfect for any type of remodeling job – for any type of client.

Type of Project

Demolition
Framing
Sanding, Cutting or Grinding
Drywall
Flooring
Tile

Type of Dust

Cement, Silica, Sawdust, General Dirt & Debris

breathe easy in
the new space?**

Or the dust?

To differentiate your business, and to leverage homeowner satisfaction into future referrals, start using and including the BuildClean System into your proposals today.

Easy-to-use, rugged, light-weight control.

The BuildClean Dust Control System is a self-contained, portable unit that provides continuous and effective air filtration. Trapping and containing dust within the job work area. A pre-filter captures large dust particles. And a HEPA-certified second-stage filter traps microscopic particulates in the air as small as one micron in diameter. And operation couldn't be simpler – just plug it in, turn it on.

Construction Grade

The hard, durable plastic body can handle the rigor of any job.

360° Design

Maximizes particle collection, allows multi-directional air collection, and boosts efficiency.

Dynamic Fan Speed Control

Prolongs the life of the pre-filter by maintaining desired CFM airflow speed, limiting the need for interaction.

Innovative Pre-filter Design

Maximum pre-filter surface area means substantially longer life.

Automatic Mode

Allows the unit to work while away, sensors adjust fan speed based on the amount of dust present on site.

LED Filter Status Monitoring

Stop-light style notification provides warning to change filters, confirms 100% consumption of use.

Dual Functionality

Recirculate the filtered air or run in negative pressure mode.

Two-Stage Filtration

Pre-filter collects coarse particles, primary high-efficiency particulate air (HEPA) filter collects fine matter.

The new industry standard in livable remodeling.
